CAREER OBJECTIVE

To continuously learn and adapt in this fast evolving age of AI, building effective, user focused solutions that drive real impact. My goal is to grow with the organization I work with while sharpening my skills, exploring new technologies, and solving problems in smarter ways.

EDUCATION

- **BE** (Computer Engineering) | Goa University | Don Bosco College of Engineering | 2022–2026 | **CGPA:** 8.08
- **HSSC** | Shree Damodar Higher Secondary School of Science | 2020–2022
- **SSC** | Bhatikar Model High School | 2010-2020

PROFESSIONAL EXPERIENCE

Technical Intern | Fluxatic Global | July 2025 - September 2025

- Developed a **responsive user interface** for an engaging and seamless user experience across all devices.
- Created and Connected Supabase database with the frontend for dynamic data fetching.
- Integrated a **Razorpay Payment Gateway** to enable smooth and reliable event booking transactions.

SKILLS

Frontend: Reactjs, Next.js, Tailwind CSS.

Database: MySQL, MongoDB, Supabase.

Backend: Next.js API, Expressjs, Python.

Soft Skills: Teamwork, Leadership.

PROJECTS

1) AI Based CCTV Forensic Analysis

Problem Statement: Manual review of CCTV slows investigations and risks missed leads especially with footage from multiple sources. A police ready solution must automate tagging with 80% match accuracy, verify authenticity via metadata, and deliver searchable, tamper proof reports to speed review and strengthen evidence.

Solution:

- Implemented **tamper proof forensic reports** using SHA 256 hashing for data integrity verification.
- Ensured **immutability and authenticity** of reports by linking each with a unique digital signature.
- Integrated secure storage and verification mechanism to detect and prevent report manipulation.

Tech Stack: Next.js, Supabase, FaceNet, YOLO, Python

Team Composition: 4

Role: Frontend Developer

2) AI Content Generator

Description: This mini project is an AI-powered content generator that takes a user's prompt and generates text responses through a simple web interface.

Solution:

- Used **ChatGoogleGenerativeAI** from LangChain to interact with Gemini.
- Utilized **HumanMessage** schema to structure user prompts.
- Integrated Gemini API key and used the **gemini 1.5 flash model** for content generation.

Tech Stack: Google Gemini API, LangChain, Flask, Python, Bootstrap

Team Composition: Solo

Role: Full Stack Developer

3) Pawsnet

Problem Statement: Goa's stray animal efforts need a tech upgrade. While sterilization, shelters, and vaccinations exist, they lack real time tracking and streamlined adoption. A centralized platform can bridge this gap enabling humane, data-driven solutions for long-term welfare.

Solution:

- Introduced an adoption centre feature to help pets find loving homes efficiently.
- Improved tracking and recovery via real-time lost pet and stray sighting reports
- Enabled swift reunions with RFID bands and scannable QR codes on adopted pets (offline).

Tech stack: Tailwind CSS, Next JS, Supabase

Team Composition: 4

Role: Frontend Developer

EXTRACURRICULUM ACTIVITIES

- Goa Police Hackathon Finalists | October 2025
- Won first place at Analysis Paralysis | ECELL, DBCE | September 2025
- Felicitated for developing JCI Ponda Official Website | April 2025
- Secretary of C-Codes Council | Computer Department | Don Bosco College of Engineering | August 2024 - August 2025
- Won third place at Kshitij | DBCE | June 2024
- Interclass Futsal Tournament Winners | Don Bosco College of Engineering | April 2023

CERTIFICATIONS

- Artificial Intelligence | BharatCares, Lenovo Leap | August 2025
- Google Virtual AIML Internship | Eduskills | April 2024
- Joy of Computing Using Python Course | NPTEL | November 2023
